

## What's new **Tableau**

### **Making forensic data acquisitions easier**

Guidance Software, the maker of Tableau, provides mission-critical hardware that solves the difficult challenges of forensic data acquisition. And, because we've been here since the beginning, our Forensic Duplicators and Bridges continue to be the preferred forensic tools of choice for digital investigators worldwide. As a trusted partner of law enforcement, we pride ourselves on our products that perform successful investigations and close cases.

As technology continues to advance, so too must the tools investigators use. The latest Tableau products keep pace with advances in I/O and storage technologies. These products offer innovative new features that are setting new standards for digital forensic hardware. Yet, we have maintained the same reliability and intuitive user interface that our users have become accustomed to having.

Our #1 objective is to deliver the products investigators need to triage and acquire data from any storage media to help close cases faster, reduce case-backlogs, and increase an investigator's ability to meet the needs of their business, department, agency, and community.

### Tableau Forensic Imager [TX1]

The new Tableau TX1 Forensic Imager sets the standard for next-generation Forensic Imaging – And it's easy to see why. One look and you will notice the stylish design of the TX1 that finally brings digital forensic products into the twenty-first century. It features a beautiful and intuitive user interface on a tablet-sized touch-screen, providing a delightful user experience. The TX1 is also a behemoth under the hood, making it the fastest and most powerful forensic imager on the market. Additional features include:

- Superior local and network imaging performance without compromises
- Images SATA, USB 3, PCIe, SAS, FireWire 800, IDE, and network shares
- Outputs to SATA, USB 3, SAS, and network shares
- Supports up to two active "forensic" jobs at a time (simultaneous imaging)
- Job queuing option for efficiency and convenience

Tableau Forensic Imager [TX1]

- Up to four destinations per source with the ability to mix clone/image duplication and local/network destinations
- Media Utility options of: view drive details, wipe, format, blank check, view & disable HPA/DCO, whole disk encryption, view S.M.A.R.T., and eject media
- On screen real-time notifications/feedback with audible feedback options

### PCIe Solutions

Digital investigators need to be prepared for all types of storage media, and that now includes PCIe SSDs. Tableau has introduced multiple new PCIe-compatible products that leverage PCIe architecture to maximize performance by simply adapting to a new form factor rather than adapting through slower media alternatives.

**Tableau Forensic Imager [TX1]** – The next generation, replacing the Tableau TD3.

**Tableau Forensic PCIe Bridge [T7u]** – A portable write-blocker that is reliable and easy-to-use.

**Tableau Forensic Universal Bridge [T356789iu]** – An integrated write-blocker for a forensic workstation that supports PCIe SSDs as well as SATA, USB 3.0, SAS, FireWire 800 and IDE drives.

(A Tableau PCIe Adapter is required for PCIe drive operations. Tableau currently offers PCIe Adapters for PCIe Card, PCIe M.2, and PCIe Apple SSDs.)

### Tableau Password Recovery [TPR1]

Tableau Password Recovery (TPR) version 1.3 now supports TrueCrypt files and partitions.

### ABOUT US

Guidance (NASDAQ: GUID) exists to turn chaos and the unknown into order and the known-so that companies and their customers can go about their daily lives as usual without worry or disruption, knowing their most valuable information is safe and secure. The makers of EnCase®, the gold standard in forensic security, Guidance provides a mission-critical foundation of market-leading applications that offer deep 360-degree visibility across all endpoints, devices and networks, allowing proactive identification and remediation of threats. From retail to financial institutions, our field-tested and court-proven solutions are deployed on an estimated 34 million endpoints at more than 70 of the Fortune 100 and hundreds of agencies worldwide, from beginning to endpoint.
